Measurett N Release

SPECIFICATION:

Measurett N Release is a cradle tray used to measure the length of fish in those states that have a slot size requirement.

Provisional patent application #60/402646.

This invention came about from a fishing trip where the only thing we had to measure Our fish was a ruler on a cooler or a stick on paper ruler attached to the side of our boat. Both are hard to use which resulted in having an illegal size fish.

You lay fish in the cradle tray to measure its length and if you have to return the Fish to the water you just slide the tray into the water and the fish slides in which will Create less damage and stress to the fish. It's the most user friendly fish measuring device available.

It's made of one formed piece of polymer-polyurethane in lengths of 20 5/8 inches And 30 5/8 inches. The base has a 2 inch wide ruler in both inches and centimeters. The sides are 2 1/2 to 5 inches high and 5 to 6 inches wide with a handle at one end.
